

Delivering Safe and Efficient Natural Gas to You

Know the signs of a natural gas pipeline leak.

The U.S. natural gas pipeline network is a highly integrated network that moves natural gas throughout the continental United States. The pipeline network has about 3 million miles of mainline and other pipelines that link natural gas production areas and storage facilities with consumers. In 2018, this natural gas transportation network delivered nearly 28 trillion cubic feet (Tcf) of natural gas to about 75 million customers.

WHAT MAKES UP THIS TRANSPORTATION NETWORK?

Transporting natural gas from production areas to consumers involves a series of steps that are generally carried out in the following order:

- Gathering systems, primarily made up of small-diameter, low-pressure pipelines, move raw natural gas from the wellhead to a natural gas processing plant or to an interconnection with a larger mainline pipeline.
- Natural gas processing plants separate hydrocarbon gas liquids, nonhydrocarbon gases, and water from the natural gas before the natural gas is delivered into a mainline transmission system.
- Wide-diameter, high-pressure interstate transmission pipelines that cross state boundaries and intrastate transmission pipelines that operate within state boundaries transport natural gas from the producing and processing areas to storage facilities and distribution centers. Compressor stations (or pumping stations) on the pipeline network keep the natural gas flowing forward through the pipeline system.
- Local distribution companies deliver natural gas to consumers through small-diameter, lower pressure service lines.

IF YOU DETECT A GAS LEAK INSIDE:

Natural Gas is odorless and colorless. We add mercaptan to our natural gas to give it the distinct and unpleasant smell of rotten eggs to alert you to its presence. Natural gas is lighter than air and will dissipate outdoors. Inside a structure, natural gas will rise to the highest point of the

structure and accumulate, creating a hazardous condition. Never try to repair a gas leak yourself. If you are indoors and detect the smell of natural gas follow these steps to safely evacuate:

- Leave the building immediately.
- Do not do anything that may create a spark, such as operating light switches, appliances, or telephones.
- Do not smoke.
- Alert others to evacuate with you.
- Once outside and a safe distance away, call Wyoming Gas Company and, when necessary 911, to report the situation.
- Do not re-enter the building until you have been authorized to do so.

If you have a natural gas emergency, our highly trained technicians are available to respond 24 hours a day, 7 days a week, 365 days a year. If you believe that you have detected a natural gas leak, please contact us at:

HAPPY 4th OF JULY!!

Our offices will be closed on Tuesday, July 4, 2023, in observation of Independence Day.

Recipe
DIRECTIONS

Beer Batter Fish Made Great

Serve with your favorite side dish(es)

Ingredients:

2 quarts of vegetable oil for frying	2 tablespoons paprika
8 (4-ounce pcs) cod fillet	2 teaspoons salt
Salt and pepper to taste	2 teaspoons ground pepper
1 cup all-purpose flour	1 egg; beaten
2 tablespoons garlic powder	1 beer (12 fluid oz)

Directions

1. Heat oil in a deep fryer to 365 degrees F (185 degrees C). Rinse fish, pat dry, and season with salt and pepper.
2. Combine flour, garlic powder, paprika, 2 teaspoons salt, and 2 teaspoons pepper. Stir egg into dry ingredients. Gradually mix in beer until a thin batter is formed. You should be able to see the fish through the batter after it has been dipped.
3. Dip fish fillets into batter, then carefully place one at a time into hot oil. Fry fish, turning once, until both sides are golden brown. Drain on paper towels and serve warm

Believe It or Not!

Researchers have found that flossing your teeth can help your memory.

Flossing prevents gum disease, which prevents stiff blood vessels, which cause memory issues.

Scientists discovered sharks that are living in an underwater volcano. Divers cannot investigate because they would get burned due to the water temperature and acidity.

In 2014, a missing woman on vacation in Iceland was finally found when it was discovered that she was in the search party looking for herself.

“Bluetooth” technology was named after a 10th century king. King Harald Bluetooth united Denmark and Norway – just like the wireless technology united computers and cell phones.

The Vatican had music which was

forbidden to be copied and was only played twice per year. It was a secret for almost 150 years, until a 14-year-old by the name of Wolfgang Amadeus Mozart heard it and transcribed it from memory.

During World War I, a Canadian soldier made a black bear his pet and named her Winnipeg. “Winnie”, as she became known, was later a resident of the London Zoological Gardens, where she was an adored attraction, especially to a boy named Christopher Robin, son of author A. A. Milne. The boy named his teddy bear after her.

A double rainbow occurs when sunlight is reflected twice inside a raindrop. If you look closely, you can see that the colors of the second rainbow appear in reverse order of the first rainbow.
